E60 — Sustainability

From Section 4, volume 12: Building Constructions (II): E2167 - Latest; Asset Management; Sustainability; Technology and Underground Utilities – Featuring standards that play a preeminent role in all aspects of sustainability and sustainable development.

.This collection includes standards on sustainability, including the design, construction, and operation of green buildings and environmental life cycle assessment.

Some included standards cover the assessment of rainwater quality, the Guide for Making Sustainability-Related Chemical Selection Decisions in the Life-Cycle of Products, the Guide for Alternative Allocation Approaches to Modeling Input and Output Flows of Secondary

Materials and Related Recycling Scenarios in Life Cycle Assessment, and the Practice for Minimum Criteria for Comparing Whole Building Life Cycle Assessments for Use with Building Codes, Standards, and Rating Systems

Translated standards are continuously added to this collection every year. Once part of the collection, a translated standard is maintained up to date with the English version.
